## Grammar for Language Describing Game Structures

## Brooks MacLachlan

March 22, 2019

## Pretty-printed EBNF grammar:

```
\langle qame \rangle ::= \text{`Players:'} \langle teamList \rangle \text{`Rounds:'} \langle roundList \rangle \text{`Win:'} \langle winConditionList \rangle
\langle teamList \rangle ::= (\langle team \rangle \{`, `\langle team \rangle\} | \langle playerList \rangle | `randomly divide' \langle playerList \rangle
        'into' \langle nameList \rangle) ['having' \langle attributeList \rangle]
\langle team \rangle ::= \text{`team'} \langle name \rangle \text{ ':'} \langle playerList \rangle
\langle playerList \rangle ::= \langle player \rangle \{`, `\langle player \rangle \}
\langle player \rangle ::= \langle name \rangle [\langle attributeList \rangle]
\langle attributeList \rangle ::= \langle attribute \rangle \{`, `\langle attribute \rangle \}
\langle attribute \rangle ::= 'affiliation with' \langle name \rangle | ('score' | 'resource' | 'counter')
        \langle name \rangle \ [\langle number \rangle] \ [\text{`min'} \ \langle number \rangle] \ [\text{`max'} \ \langle number \rangle]
\langle roundList \rangle ::= \langle round \rangle ';' \{\langle round \rangle ';' \{\langle round \rangle ';' \{\langle modifierList \rangle\}
\langle modifierList \rangle ::= \langle modifier \rangle ';' \{\langle modifier \rangle ';'}
\langle modifier \rangle ::= ['just' | 'from'] (\langle roundReference \rangle ('before' | 'after') \langle phaseReference \rangle
        'insert' \langle phase \rangle \mid \langle roundReference \rangle 'replace' \langle phaseReference \rangle 'with' \langle phase \rangle)
\langle roundReference \rangle ::= \text{`round'} [\langle number \rangle]
\langle phaseReference \rangle ::= 'phase' [\langle number \rangle]
\langle round \rangle ::= \langle phaseList \rangle ['repeated' \langle number \rangle 'times']
\langle phase \rangle ::= \langle action \rangle \mid \langle progression \rangle
\langle phaseList \rangle ::= \langle phase \rangle \{ '\n' \langle phase \rangle \}
```

```
\langle action \rangle ::= \langle competition \rangle \mid \langle decision \rangle
\langle competition \rangle ::= [\text{`scored'}] [\text{`team'}] \text{`competition between'} \langle idList \rangle
\langle decision \rangle ::= [\text{`self-included'}] \text{ `vote by' } \langle idList \rangle \text{ 'between' } \langle idList \rangle \text{ ['self-included']}
       'nomination of' \langle number \rangle 'by' \langle identifier \rangle 'between' \langle idList \rangle | 'allocation of'
       \langle name \rangle 'by' \langle idList \rangle | ['self-included'] 'directed vote by' \langle idList \rangle 'between'
       \langle idList \rangle | 'uses?' \langle identifier \rangle 'then' '(' \langle phaseList \rangle ')' ['otherwise' '('
       \langle phaseList \rangle ')'
\langle progression \rangle ::= (\langle affiliationUpdate \rangle \mid \langle counterUpdate \rangle) 'for' \langle idList \rangle
\langle affiliationUpdate \rangle ::= \text{`elimination'} | (\text{`add'} | \text{`remove'}) \langle name \rangle | [\text{`number preserving'}]
       'swap' \langle nameList \rangle ['adding' \langle nameList \rangle] | 'change' \langle name \rangle 'to' \langle name \rangle |
       'merge' \langle nameList \rangle [\langle name \rangle]
\langle counterUpdate \rangle ::= ('increase' | 'decrease') \langle name \rangle 'by' \langle value \rangle | 'set' \langle name \rangle
       'to' \langle value \rangle
\langle value \rangle ::= \langle number \rangle | \langle name \rangle | 'results' 'of' (\langle compReference \rangle | \langle allocateReference \rangle | 
       |\langle voteReference \rangle| \langle identifier \rangle \langle name \rangle
\langle idList \rangle ::= \langle identifier \rangle \ \{`,` \langle identifier \rangle \} \ [`except' \langle idList \rangle]
\langle identifier \rangle ::= (\text{`everyone'} \mid \langle name \rangle \mid \text{`chance'} \cdot (\text{`} \langle idList \rangle \cdot)\text{'} \mid \text{`nominated'} \mid
       'tied' | 'eliminated' | ('winner' | 'loser') 'of' \( \comp Reference \) | ('majority'
       | 'minority') 'of' \langle voteReference \rangle [\langle tiebreaker \rangle] | ('highest' | 'lowest' |
       'most' | 'least') \langle name \rangle '(' \langle idList \rangle ')' [\langle tiebreaker \rangle] ['*' \langle value \rangle]
\langle compReference \rangle ::= \text{`competition'} [\langle number \rangle]
\langle allocateReference \rangle ::= 'allocation' [\langle number \rangle]
\langle voteReference \rangle ::= \text{`vote'} [\langle number \rangle]
\langle tiebreaker \rangle ::= \text{`tiebroken by'} ([\langle action \rangle] \langle identifier \rangle)
\langle name \rangle ::= ('a' \mid ... \mid 'z' \mid 'A' \mid ... \mid 'Z') \{ 'a' \mid ... \mid 'z' \mid 'A' \mid ... \mid 'Z' \mid '0' \mid ... \mid '9' \}
\langle nameList \rangle ::= \langle name \rangle \{`, `\langle name \rangle \}
\langle number \rangle ::= (`0` \mid ... \mid `9`) +
\langle winCondition \rangle := [\text{'team'}] \text{ 'achieving' } \langle name \rangle \text{ 'of' } \langle number \rangle | [\text{'team'}] \text{ 'competition'}
       | 'survive'
```

```
\langle winConditionList \rangle ::= \langle winCondition \rangle \ \{`,` \langle winCondition \rangle \}
```

## Notes:

- make grammar unambiguous
- should allocate be a decision and progression or just progression? Both, but decision will automatically also do the progression. The progression exists for non-decision related resource updates, such as awarding a player more of a resource for winning a competition.
